

UL 969 Certified

# OEM Labels & RFID Solutions

Compliance-Driven. Durable. Serialized.  
Built for Industrial Equipment.

## Quick Domestic Production.

We support electrical and industrial OEM manufacturers with certified, high-performance labeling engineered for compliance, durability, and production agility.

## Built For Compliance-Driven Equipment Manufacturers

- Electrical Panels & Switchgear
- Power Distribution Equipment
- Generators & Energy Storage Systems
- HVAC & Commercial Equipment
- Industrial Machinery

When compliance matters and production schedules cannot slip, manufacturers partner with us.

## Mid-sized OEM manufacturers often face two challenges

- Large converters with rigid MOQs and long lead times
- Small shops lacking compliance certification depth

We bridge that gap with certified material constructions, engineering collaboration, and flexible production capabilities.

## Why OEM Manufacturers Partner With Us

### UL 969 expertise built into every label

We develop and maintain multiple UL-recognized material constructions—allowing us to recommend the right solution based on your specific application, environment, and compliance requirements.

- UL 969 certified materials
- Engineering collaboration
- Rapid domestic production
- RoHS 3 compliant constructions
- Flexible production volumes
- Lab validation support available

# UL 969 Expertise Built Into Every Construction

We maintain multiple UL-recognized material systems—not just a single construction—allowing us to match materials to specific substrates, environments, and performance requirements.

## Where Labeling Performance Matters Most

### Electrical & Industrial Equipment

Compliance-driven labeling for panels, switchgear, and power systems

### HVAC & Commercial Equipment

Durable labels built for outdoor exposure, UL requirements, and long service life

### Wiring & Cable Identification

Solutions designed for movement, heat, and long-term legibility

### Serialized Identification & Nameplates

Supporting traceability, asset tracking, and regulatory compliance

## Solving OEM Labeling Challenges

- Label failure in harsh environments
- Inconsistent supplier quality
- Traceability gaps across components
- Compliance and audit risks
- Production delays and rework

## How We Work with OEM Manufacturers

- Understand your application and environment
- Recommend the right labeling solution
- Prototype and validate performance
- Support compliance requirements
- Scale production to meet demand

## RFID-Enabled Labeling for Smart Manufacturing

- Real-time tracking of components and assets
- Reduced manual errors in production
- Improved visibility across operations
- Scalable for OEM production environments

## Schedule an OEM Compliance & Identification Consultation
